

AYUSH RAMAWAT

PRODUCT DESIGNER | UX & SERVICE DESIGN

Dublin, Ireland | [Phone] | [Email] | [Portfolio] | [LinkedIn]

PROFILE

Product designer with experience across consumer products, internal tools and service workflows in education, gaming and healthcare. MSc Human-Computer Interaction graduate from University College Dublin with a background in 3D animation and interactive media. Work spans user research, interaction design, prototyping, usability testing and AI-enabled workflow design, with a focus on turning operational problems into usable products and services.

EXPERIENCE

Product & Automation Designer (Part-time) | BPM Limited

Nov 2025 - Present | Dublin, Ireland

Design and implement digital workflows for a group managing three dental clinics, identifying repetitive operational tasks that can be automated while keeping human review where appropriate.

Designed and launched an internal employee time-tracking system that replaced manual attendance sheets with a locally hosted mobile-accessible workflow, improving the reliability of records used for monthly payroll preparation.

Owned user flows, interface design, automation logic, research and testing for the attendance system, enabling staff to clock in and out from their phones when connected to the clinic network.

Designed management dashboards to centralise financial and operational information for the business owner and reduce reliance on disconnected spreadsheets.

Researched and prototyped an AI voice appointment-booking experience, identified adoption barriers among older patients, and explored a WhatsApp-based alternative with lower interaction friction.

Work end-to-end within a three-person team, from problem discovery and workflow mapping through interface design, prototyping, automation and testing.

Product Designer | OAKS Kids Pvt. Ltd.

Aug 2024 - Jun 2025 | Full-time

Designed interactive game experiences for PEEKAZOO, including educational concepts that combined mobile interaction, visual learning and augmented reality.

Designed an AR animal-learning game and contributed to Magic Filters, an educational experience covering animals, fruits, emotions, occupations and other learning themes.

Contributed as a concept artist and visual designer for Mavericks, developing visual directions and comic-style assets for the interactive game experience.

Collaborated within a multidisciplinary team of approximately 25 across product, 3D modelling, animation, texturing and production.

Built an AI-assisted asset-generation workflow using n8n and generative tools, reducing parts of the 3D asset-production process from approximately 7-10 days to about 1 day.

Contributed to publicly released products including PEEKAZOO and Mavericks on the Google Play Store.

CORE SKILLS

Product & UX: Interaction design, user flows, information architecture, wireframing, prototyping, usability testing, responsive design, visual design

Research & Service Design: User interviews, research synthesis, journey mapping, workshop facilitation, service design, systems thinking, concept development

AI & Automation: Workflow automation, AI prototyping, API integration, MCP integrations, conversational interfaces, voice AI

SELECTED PROJECTS

Conscious Connections | Product & Service Design Project

2025 - 2026 | *University College Dublin*

Worked in a four-person HCI team to design a service ecosystem supporting LGBTQ+ women and non-binary people in rural Ireland, addressing barriers around distance, privacy, trust and fragmented access to community resources. Coordinated research and workshop activities, synthesising findings into service opportunities spanning a Community Box, website, resources and events, and Buddy Connect. Contributed across product design, visual direction and system architecture, with a focus on privacy, user control, confidence and participation.

Détente | IBM x UCD HCI Hackathon

Runner-Up - *Most Innovative Use of Makerspace*

Developed the core concept for an intelligent fashion bracelet designed to make prolonged doom-scrolling visible through progressive colour feedback. Conducted early research around scrolling behaviour and designed the physical prototype, using a Wizard of Oz approach to simulate real-time feedback and interaction. Recognised as Runner-Up for Most Innovative Use of Makerspace.

EDUCATION

MSc Human-Computer Interaction | University College Dublin

2025 - 2026 | *Dublin, Ireland*

Focus: User research, interaction design, service design, prototyping and human-centred design.

MA in Multimedia - Specialisation in 3D Animation | ICAT Design & Media College

2022 - 2024 | *Hyderabad, India*

Focus: 3D design, animation, visual storytelling and interactive media.

TOOLS

Design: Figma, Adobe Photoshop, Illustrator, After Effects, Premiere Pro, Canva, draw.io | **3D & Interactive:** Autodesk Maya, ZBrush, Blender, Unity

AI & Product Building: n8n, Codex, Claude Code, Cursor, Google Antigravity, ElevenLabs, APIs, MCPs | **Development &**

Deployment: GitHub, Supabase, Vercel, Railway

Collaboration: Notion, Google Workspace

RECOGNITION

Maverick Recognition - OAKS Kids Pvt. Ltd. | Recognised across two consecutive award cycles for contribution to product work and AI-enabled process improvement.
